Field	Details
Scenario Name	Bugzilla & TestLink – Functional Validation Testing
Module ID	124
Tester Name	Priyanshi
Test Case Description	To verify Bugzilla bug tracking workflow and TestLink test case management and execution functionality.
Prerequisites	Stable internet connection. Valid application URL. Valid user credentials. Bugzilla and TestLink applications should be accessible. User should have required permissions to create, view and execute test cases/bugs.
Environment Information	MacBook, Windows, Android

Scenario ID	Scenario	Test Steps	Test Input	Expected Results	Actual Results	Status	Comments
a1	Bugzilla – Bug Tracking Workflow	1.Open Bugzilla application 2.Observe the Bugzilla home page 3.Verify the main bug-tracking options 4.Verify the user/session information	Bugzilla URL and valid user credentials	Bugzilla home page should load successfully and main bug-tracking options and user/session information should be displayed correctly.	Bugzilla home page opened successfully and bug-tracking options and user/session information were displayed.	Pass	Done Tested
a2	Report a New Bug	1.Open the New Bug page 2.Select Product, Component and Version 3.Select Severity 4.Enter the bug Summary and Description 5.Submit the bug	Product: Web Application Component: Login Version: 1.0 Severity: Normal Summary: Login button not working	New bug should be submitted successfully and a unique Bug ID should be generated.	New bug was submitted successfully and Bug ID was generated.	Pass	Done Tested
a3	View Reported Bugs	1.Open the Bugzilla bug list 2.Observe the listed bugs 3.Verify the bug ID and Summary 4.Verify the displayed bug information	Bug List	Reported bugs should be displayed with correct Bug ID, Summary and relevant bug information.	Reported bugs were displayed with correct Bug ID, Summary and bug information.	Pass	Done Tested
a4	Verify Bug Details	1.Open the reported bug 2.Verify the bug Summary 3.Verify Status, Product and Component 4.Verify Severity and Priority 5.Verify the Description	Reported Bug ID	Selected bug details should be displayed correctly, including Summary, Status, Product, Component, Severity, Priority and Description.	Bug Summary, Status, Product, Component, Severity, Priority and Description were displayed correctly.	Pass	Done Tested
b1	TestLink Project Home	1.Open TestLink 2.Observe the TestLink home page 3.Verify the Project Tree 4.Select the Web Application project	Project: Web Application	TestLink home page should load successfully and the Web Application project should be available and selectable from the Project Tree.	TestLink home page opened successfully and Web Application project was available.	Pass	Done Tested
b2	Create Test Case	1.Open the Web Application project 2.Open the Test Cases section 3.Create a new test case 4.Enter Test Case ID and Summary 5.Enter the required test details 6.Save the test case	Test Case ID: TC-001 Summary: Verify Login Functionality Test details: Valid username and password	New test case should be created and saved successfully with the entered details.	New test case was created and saved successfully.	Pass	Done Tested
b3	Execute Test Case	1.Open the Execute Test Case page 2.Select the project/test plan 3.Open the required test case 4.Execute the defined test steps 5.Record the execution result	Test Case: TC-001 Result: Pass/Fail	Test case should execute successfully and the execution result should be recorded correctly.	Test case was executed successfully and execution result was recorded.	Pass	Done Tested
b4	View Execution Report	1.Open the Execution Report 2.Observe the Execution Summary 3.Verify the total test cases 4.Verify the passed and failed results 5.Verify the individual test case details	Execution Report	Execution report should display the correct total test cases, passed/failed results and individual test case execution details.	Execution report displayed total test cases and passed/failed execution results correctly.	Pass	Done Tested
